

# Engineering and Project Management

## The Challenge

The principal challenge for project engineers and managers is, of course, meeting objectives on time and on budget. Now more than ever, projects of all kinds are susceptible to a range of external factors that incur additional costs and affect timing, project profitability and client relations.

People management is critical to cost control. An efficient workforce that is focused on objectives ensures that milestones are met and projects progress according to plan.

## The WorkMeter Solution

### Project Profitability

- Improve the cost-benefit relationship.
- Optimise productivity across teams.
- Ensure teams stay focused on activities that bring value and advance projects.
- Shorten delivery times.

### Automatic Collection of Objective Data

- Leverage objective real-time data to gain visibility of projects and make better decisions.
- Improve risk management.
- Eliminate administrative costs associated with manual processes used to gain project awareness

## Contents

---

1. The Challenge
2. The WorkMeter Solution
3. Supporting Features
4. WorkMeter Benefits

### Optimise Resource Distribution

- Use data to allocate resources and better plan workloads.
- Gain organisation-wide visibility of time estimated per task/project vs. actual time logged per task/ project.
- Consistently meet deadlines and even deliver ahead of time.

### Support Mobility

- Access and share data from anywhere at any time.
- Offer multi-language support for international projects.

WorkMeter is a software solution that collects, processes and presents objective data on activity, productivity and application usage as employees work on company PCs, mobile phones and other devices.

## Supporting Features

### Optimal Profiles

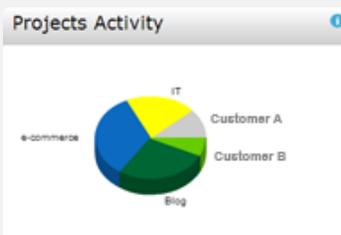

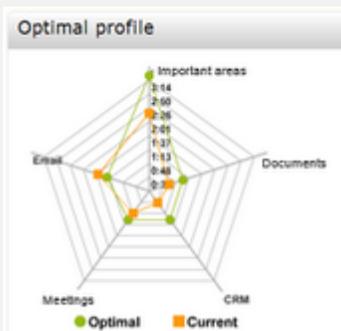

This feature defines expectations for every team member. It gives individuals a consolidated view of their actual time logged per task versus the time dedication expected for their particular role, which helps teams to maintain high levels of productivity and stay focused on activities that bring value to projects.

Team members themselves are able to identify deviations and determine the best ways to improve.

### Project Management

Both project management and analytics are fully integrated into the WorkMeter platform. Users simply click to open a project to view their activity.

A web-based interface makes it possible to link WorkMeter with other project planning, automation and dynamic data Exchange tools.

### Automated Reporting

WorkMeter collects, processes and presents objective data on activity, productivity and application usage as employees work on company PCs, mobile phones and other devices. It allows users to stay on top of the projects they are involved in and even log offline time dedicated to work-related tasks.

Organisations get near real-time visibility of time invested in activities so inefficiencies can be identified immediately. And since, all data is gathered automatically, no manual processes are necessary to gain full awareness of project progress.

### Management by Objectives

This feature allows teams to establish indicators upon which objectives will be based.

The indicator – objective relationship enables team members to compare optimal time dedications with actual time logged by the system, so that they themselves can anticipate potential deviations before deadlines arrive and adjust habits to get back up to speed.

## Benefits

Improve project profitability and lower costs

Deliver on time and even ahead of time

Control and adjust workloads

Boost employee motivation

Reduce administrative costs

Transmit professionalism and dedication to clients
